Customer Shopping Behavior Analysis

1. Project Overview

This project analyzes customer shopping behavior using transactional data from 3,900 purchases across various product categories. The goal is to uncover insights into spending patterns, customer segments, product preferences, and subscription behavior to guide strategic business decisions.

2. Dataset Summary

- Rows: 3,900
- Columns: 18
- Key Features:
  - Customer demographics (Age, Gender, Location, Subscription Status)
  - Purchase details (Item Purchased, Category, Purchase Amount, Season, Size, Color)
  - Shopping behavior (Discount Applied, Promo Code Used, Previous Purchases, Frequency of Purchases, Review Rating, Shipping Type)
- Missing Data: 37 values in Review Rating column

Business Problem
A retail company wants to understand customer purchasing behavior to improve revenue, customer engagement, and retention strategies.

This project follows a structured data analytics pipeline:

- Data Cleaning & Feature Engineering using Python
- Data Analysis using SQL
- Visualization & Insights using Power BI

3. Exploratory Data Analysis using Python

We began with data preparation and cleaning in Python:

- **Data Loading:** Imported the dataset using `pandas`.

- **Initial Exploration:** Used `df.info()` to check structure
  df`.describe()` for summary statistics

	Customer ID	Age	Gender	Item Purchased	Category	Purchase Amount (USD)	Location	Size	Color	Season	Review Rating	Subscription Status	Shipping Type	Discou Appli

- **Missing Data Handling:** Checked for null values and imputed missing values in the `Review Rating` column using the median rating of each product category.
- **Column Standardization:** Renamed columns to **snake case** for better readability and documentation.
- **Feature Engineering:**
  - Created **age_group** column by binning customer ages.
  - Created **purchase_frequency_days** column from purchase data.
- **Data Consistency Check:** Verified if `discount_applied` and `promo_code_used` were redundant; dropped `promo_code_used`.
- **Database Integration:** Connected Python script to PostgreSQL and loaded the cleaned DataFrame into the database for SQL analysis.

4. Data Analysis using SQL (Business Transactions)

We performed structured analysis in PostgreSQL to answer key business questions:

1. **Revenue by Gender** – Compared total revenue generated by male vs. female customers.

	gender text	revenue numeric
1	Female	75191
2	Male	157890

2. **High-Spending Discount Users** – Identified customers who used discounts but still spent above the average purchase amount.

	customer_id bigint	purchase_amount bigint
1	2	64
2	3	73
3	4	90
4	7	85
5	9	97
6	12	68
7	13	72
8	16	81
9	20	90
10	22	62
11	24	99

Total rows: 839 Query complete 00:00:

3. **Top 5 Products by Rating** – Found products with the highest average review ratings.

	item_purchased text	Average Product Rating numeric
1	Gloves	3.86
2	Sandals	3.84
3	Boots	3.82
4	Hat	3.80
5	Skirt	3.78

4. **Shipping Type Comparison** – Compared average purchase amounts between Standard and Express shipping.

	shipping_type text	round numeric
1	Standard	58.46
2	Express	60.48

5. **Subscribers vs. Non-Subscribers** – Compared average spend and total revenue across subscription status.

	subscription_status text	total_customers bigint	avg_spend numeric	total_revenue numeric
1	Yes	1053	59.49	62645.00
2	No	2847	59.87	170436.00

6. **Discount-Dependent Products** – Identified 5 products with the highest percentage of discounted purchases.

	item_purchased text	discount_rate numeric
1	Hat	50.00
2	Sneakers	49.66
3	Coat	49.07
4	Sweater	48.17
5	Pants	47.37

7. **Customer Segmentation** – Classified customers into New, Returning, and Loyal segments based on purchase history.

	customer_segment text	Number of Customers bigint
1	Loyal	3116
2	New	83
3	Returning	701

8. **Top 3 Products per Category** – Listed the most purchased products within each category.

	item_rank bigint	category text	item_purchased text	total_orders bigint
1	1	Accessories	Jewelry	171
2	2	Accessories	Sunglasses	161
3	3	Accessories	Belt	161
4	1	Clothing	Blouse	171
5	2	Clothing	Pants	171
6	3	Clothing	Shirt	169
7	1	Footwear	Sandals	160
8	2	Footwear	Shoes	150
9	3	Footwear	Sneakers	145
10	1	Outerwear	Jacket	163
11	2	Outerwear	Coat	161

9. **Repeat Buyers & Subscriptions** – Checked whether customers with >5 purchases are more likely to subscribe.

	subscription_status text	repeat_buyers bigint
1	No	2518
2	Yes	958

10. **Revenue by Age Group** – Calculated total revenue contribution of each age group.

	age_group text	total_revenue numeric
1	Young Adult	62143
2	Middle-aged	59197
3	Adult	55978
4	Senior	55763

Key Insights:

- Male customers generate significantly higher revenue compared to female customers, indicating a stronger purchasing contribution from this segment.
- Clothing category is the top revenue contributor, making it the primary driver of business performance.
- Young adults represent the highest revenue-generating age group, highlighting them as a key target demographic.
- Discount usage increases sales volume but does not significantly improve overall revenue, suggesting a potential impact on profit margins.
- A small group of products contributes disproportionately to total purchases, indicating dependency on limited high-performing items.
- Majority of customers fall into the “Loyal” segment, showing strong repeat purchase behavior.

5. Dashboard in Power BI

Finally, I have built an interactive dashboard in **Power BI** to present insights visually.

An interactive Power BI dashboard was created to visualize:

- Revenue trends
- Customer segmentation
- Product performance
- Discount impact

6. Business Recommendations

1. **Boost Subscription Conversion**
Customers with subscriptions contribute a significant portion of revenue, but the majority are still non-subscribers.

Action:
Introduce exclusive benefits such as early access to products, special discounts, or loyalty rewards to convert non-subscribers into subscribers.

2. **Strengthen Loyalty Programs**
A large number of customers fall into the “Loyal” segment, indicating strong repeat purchase behavior.

Action:
Implement reward points, cashback offers, and personalized deals to retain and further engage these high-value customers.

3. **Optimize Discount Strategy**
Discounted purchases contribute significantly to overall sales, but excessive discounts may reduce profitability.

Action:
Use targeted discounts instead of blanket offers, focusing on:
Low-performing products
Specific customer segments

4. **Focus on High-Revenue Categories**
The Clothing category generates the highest revenue among all categories.

Action:
Increase inventory and product variety
Run targeted campaigns for clothing products
Bundle offers with accessories to increase basket size

5. **Target High-Value Customer Segments**
Young adults and middle-aged customers contribute the highest revenue.

Action:
Focus marketing campaigns on these segments
Use social media and personalized recommendations

6. **Promote Top-Performing Products**
A small set of products contributes to a large portion of total purchases.

Action:
Highlight these products in ads and homepage
Recommend similar products to increase cross-selling

7. **Improve Shipping Strategy**
Customers using faster shipping options tend to have slightly higher purchase values.

Action:
Promote express shipping with offers
Bundle fast delivery with premium products
